

## Space Data for regional policies

**POLICY AND FINANCE Arena, Pad 21**

26/06/2024 | 15.00 - 15.50

Organized by ART-ER

### ABSTRACT

The increasing availability and precision of satellite data, and their use for various applications, offer significant opportunities to improve European, national and regional policies. Networks and initiatives such as NEREUS (Network of European Regions Using Space Technologies), Destination Earth and Vera promote the use of space technologies in European regions, stimulating collaboration and knowledge sharing. The panel will discuss some experiences and case studies from European regions, then focusing on how this data can be used to implement digital twin platforms to support policy makers. These examples demonstrate the great potential of satellite data in supporting regional decision-making and promoting sustainable and resilient communities.

### AGENDA

#### Introduction

**Marina Silverii**, ART-ER

#### Panel:

- **Roya Ayazi**, Nereus Network
- **Najla Said**, Serco
- **Marco Folegani**, Meeo
- **Katia Raffaelli**, Regione Emilia-Romagna

**Moderator: Anilkumar Dave**, Space Economy and Open Innovation Lead, Darwix
